                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a pharmaceutical composition comprising a liposome associated with an isolated polypeptide derived from Neisseria meningitidis strain 608B, where the polypeptide is the NBA protein. The composition is useful for inducing an immune response against N. meningitidis, for preventing and/or treating N. meningitidis infection and for treating and/or preventing neisserial infection chosen from N. meningitidis, N. gonorrhoeae, N. lactamica and N. polysaccharea. It is useful for treatment or prophylaxis of meningitis and meningoccaemia, in a host. The host is a mammal, preferably a human and more preferably an adult human. The present sequence is a modified version of the Neisseria meningitidis strain 608B NSpA protein. Note: This sequence is not shown in the specification but has been created based on the information given and the wild-type NspA protein shown in Figure 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Composition comprising liposome associated with isolated polypeptide or polymoralectide derived from Neisseria meningitidis strain 608B, or its fragment or analog, useful for inducing an immune response against N. meningitidis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MKKALATLIALALPAPAALAEGASGFYVQADAAHAKASSSLGSAKGFSPRISAGYRINDLR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF

The isolated 22 kD antigen, antigents of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis antigen. DNA sequences encoding the antigen, or their fragments, can be used as probes for the detection of pathogenic Neisseria bacteria. (Updated on 16-OCT-2003 to standardise OS field)

A proteinase K resistant surface protein has been isolated from 4 strains of N. meningitidis (AAT3093 to AAT39042). The isolated 22 kD antigen, antigenic fragments of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect N. meningitidis antigen. DNA sequences encoding the antigen, or their fragments, can be used as probes for the detection of pathogenic Neisseria bacteria. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 FAVDYTRYKNYKAPSTDFKLYSIGASVIYDFDTQSPVKPYFGARLSLNRASAHLGGSDSF 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a new gram-negative bacterial bleb presenting on its surface the PorB outer membrane protein from Chlamydia trachlomatis, or a protective antigen from C. pneumoniae. The invention is useful for preventing C. trachomatis or C. pneumoniae infection in a host. The present amino acid sequence represents a Neisseria gonorrhoeae protein as described in the invention

A proteinase K resistant surface protein has been isolated from 4 strains of N. meningitidis (AAT39039 to AAT39042). The isolated 22 kD antigen, antigenic fragments of antibodises can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis antigen. DNA sequences encoding the antigen, or their fragments, can be used as probes for the detection of pathogenic Neisseria bacteria. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or

The present invention relates to a pharmaceutical composition comprising. a liposome associated with an isolated polypeptide derived from Neisseria meningitidis strain 608B, where the polypeptide is the NspA protein. The composition is useful for inducing an immune response against N. meningitidis, for preventing and/or treating N. meningitidis infection meningitidis, N. gonorrhoeae, N. lactamica and N. polysaccharea. It is useful for treatment or prophylaxis of meningitis and meningoccaemia, in a host. The host is a mammal, preferably a human and more preferably an adult human. The present sequence is a modified version of the Neisseria meningitidis strain 608B NspA protein. Note: This sequence is not shown in the specification but has been created based on the information given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF 120

The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABPR1074.36-ABPR1046 represent nucleic acid molecules of the invention

New protein from Neisseria gonorrheae, useful for the manufacture of a medicament for treating or preventing N. gonorrheae infection.

The present invention relates to a pharmaceutical composition comprising a liposome associated with an isolated polypeptide derived from Neisseria meningitidis strain 608B, where the polypeptide is the NPA protein. The composition is useful for inducing an immune response against N. meningitidis, for preventing and/or treating N. meningitidis infection and for treating and/or treating neisserial infection chosen from N. meningitidis, N. gonornhoeae, N. lactamica and N. polysaccharea. It is useful for treatment or prophylaxis of meningitis and meningoccaemia, in a host. The host is a mammal, preferably a human and more preferably an adult human. The present sequence is a modified version of the Neisseria meningitidis strain 608B NspA protein. Note: This sequence is not shown in the specification but has been created based on the information given and the wild-type NspA protein shown in Figure 1.

Patent No. 6287574

GENERAL INFORMATION:
APPLICANT: Brodeur, Bernard R
APPLICANT: Martin, Denis
APPLICANT: Hanel, Josee
APPLICANT: Rloux, Clement
TITLE OF INVENTION: PROTEINASE K RESISTANT SURFACE PROTEIN
TITLE OF INVENTION: OF NEISSERIA MENINGITIDIS
NUMBER OF SEQUENCES: 30
CORRESONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
STREET: 3000 K Street, N.W., Suite 500
CITY: Washington
CITY: Washington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 170;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER SEADABLE FORM:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Substitution opak precursor - Neisseria gonorrhoeae (strain MS11) (fragments)

NiAlternate names: outer membrane protein opak

C;Species: Neisseria gonorrhoeae

A;Variety: strain MS11

C;Date: 13-4nn-1995 #sequence_revision 17-Oct-1997 #text_change 17-Oct-1997

C;Accession: Si6tio

R;Bhat, K.S; Gibbs, C.P; Barrera, O.; Morrison, S.G.; Jaehnig, F.; Stern, A.; Kupsch,

Mol. Microbiol. S; 1899-1901, 1991

A;Attle: The opacity proteins of Neisseria gonorrhoeae strain MS11 are encoded by a fami

A;Accession: Si6tio

A;Molecule type: DNA

A;Rosidues: 1.261 - 48Hb.

A;Accession: Si6tio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A Experimental source: strain MSII, variant 4.8
A Note: the authors translated the codon CCA for residue 32 as Thr
A Note: the authors did not translate the sequence for the signal peptide
A Note: expression of opacity proteins is regulated by the number of translated repeat of repeats place the start codon in frame with the rest of the protein

A;Experimental source: strain C1938
A;Note: expression of opacity proteins is regulated by the number of translated repeat effected the start codon in frame with the rest of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     <del>U</del>
                                                                                                                                                                                                                                                                   opacity protein-related protein OPM1 precursor - Neisseria meningitidis (strain C1938)
Nalternate names: outer membrane protein class 5
C; Species: Neisseria meningitidis
A; Variety: strain C1938
C; Date: 19-Mar-1997 #sequence_revision 17-Oct-1997 #text_change 09-Jul-2004
C; Accession: 808514

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                    Title: Expression of gonococcal protein II in Escherichia coli by translational fusion
Reference number: S04380; MUID:89343653; PMID:2503682
                                                                                                                                                                                                                                                   A)Cross-references: UNIPROT:050959; EMBL:X15780
A)Experimental source: strain F62-SF, serogroup IB-3; clone F62-SFG1
A;Note: the authors did not translate the sequence of the signal peptide
A;Note: expression of opacity proteins is regulated by the number of translated repeat
of repeats place the start codon in frame with the rest of the protein

opacity protein P.IIc precursor - Neisseria gonorrhoeae (strain JS3) (fragments)

us-10-650-123-2.rpr

```
opacity protein opaH precursor - Neisseria gonorrhoeae (isolate 15063G)
NyAlternate names: cell invasion protein opaH
C;Species: Neisseria gonorrhoeae
A;Variety: isolate 15063G
C;Date: 14-Peb-1997 #sequence_revision 13-Mar-1997 #text_change 09-Jul-2004
C;Accession: S72343
R;Waldbeser. L.S.; Ajioka, R.S.; Merz, A.J.; Puaoi, D.; Lin, L.; Thomas, M.; So, M.
Mol. Microbiol. 13, 919-928, 1994
A;Title: The opaH locus of Neisseria gonorrhoeae MS11A is involved in epithelial cell in A;Reference number: S72343; MUID:95115561; PMID:7815949
A;Accession: S72343
A;Accession: S72343
A;Accession: S72343.
